```

Question 2

Insert questions from Daniels parts

5-7) Note: for these parts I make the mistake of using SSH instead of HTTPS, which made this way harder.

First used ssh-keygen to make SSH key, then forked Daniel's directory. Then git clone to clone directory. (git clone -b Current_Assignment [git@github.com:jabr7072/Flora](https://github.com/jabr7072/Flora))

After editing the file used git add ., git commit -m, and git push. I then I had to submit a pull request to Daniel, which once approved changed it in the correct directory. These extra steps I believe were due to using SSH.

12) `jake@jake-VirtualBox:~/git/Assignments/Assignment4/Flora$ git pull origin Current_Assignment`

13) `jake@jake-VirtualBox:~/git/Assignments/Assignment4/Flora$ git checkout master`

Branch master set up to track remote branch master from origin.

Switched to a new branch 'master'

14) `jake@jake-VirtualBox:~/git/Assignments/Assignment4/Flora$ git merge Current_Assignment`

Updating 7c4e275..d20e1ab

Fast-forward
